Abstract of FR2802406

The gastroplasty ring consists of a supple band (1) with its two ends fastening round the stomach. It has an annular compression chamber of variable volume, connected by a catheter (4) to a pressure regulator (6), and a closure (13) with a pneumatic system (11, 12) to open and close the ring. The closure comprises male and female components, the latter being made in one piece and from the same plastic material as the compression chamber.
